SUBJECT INDEX

Active/passive infrared imaging systems, dual, 74
Aerosols, simulation studies of infrared signatures from remote, 149
Ambient flux, errors in passive infrared imaging systems due to reflected, 110
Array design for optimum system performance, focal plane, 66
Array, development of an earth resource pushbroom scanner utilizing a 90-element 8–14 micrometer (Hg,Cd)Te, 18
Array, thermal IR imaging system using a self-scanned HgCdTe/CCD detector, 10
Arrays for tactical imaging, the utility of available low quantum efficiency detector, 136
Astronomical applications, near-infrared spectral imaging Michelson interferometer for, 61

Background radiation on radiometric temperature measurement, effects of reflected, 133

CCD detector array, thermal IR imaging system using a self-scanned HgCdTe/, 10
Coherent and incoherent imaging in the location of point sources, comparison of, 115
Comparison of coherent and incoherent imaging in the location of point sources, 115
Complexity, precision-machine optics for reducing system, 91
Converter for dynamic infrared target simulation applications, visible-to-infrared image, 129

Design considerations for a reflective IR imager, 83
Design for optimum system performance, focal plane array, 66
Design for a staring mosaic sensor, system, 53
Designs for a wide-field high-resolution low-scatter image device, prototype, 98
Detector array, thermal IR imaging system using a self-scanned HgCdTe/CCD, 10
Detector arrays for tactical imaging, the utility of available low quantum efficiency, 136
Development of an earth resource pushbroom scanner utilizing a 90-element 8–14 micrometer (Hg,Cd)Te array, 18
Dual active/passive infrared imaging systems, 74
Dynamic infrared image simulation, passive visible to infrared transducer for, 140
Dynamic infrared target simulation applications, visible-to-infrared image converter for, 129

Earth resource pushbroom scanner utilizing a 90-element 8–14 micrometer (Hg,Cd)Te array, development of an, 18
Effects of reflected background radiation on radio-metric temperature measurement, 133
Efficiency detector arrays for tactical imaging, the utility of available low quantum, 136
8–14 micrometer (Hg,Cd)Te array, development of an earth resource pushbroom scanner utilizing a 90-element, 18
Element 8–14 micrometer (Hg,Cd)Te array, development of an earth resource pushbroom scanner utilizing a 90-, 18
Errors in passive infrared imaging systems due to reflected ambient flux, 110

Field high-resolution low-scatter image device, prototype designs for a wide-, 98
Field imagers—pushbroom or whiskbroom scanners, wide-, 38
Flux, errors in passive infrared imaging systems due to reflected ambient, 110
Focal plane array design for optimum system performance, 66

(Hg,Cd)Te array, development of an earth resource pushbroom scanner utilizing a 90-element 8–14 micrometer, 18
HgCdTe/CCD detector array, thermal IR imaging system using a self-scanned, 10
High-resolution low-scatter image device, prototype designs for a wide-field, 98

IR imager, design considerations for a reflective, 83

IR imaging system using a self-scanned HgCdTe/CCD detector array, thermal, 10
Image converter for dynamic infrared target simulation applications, visible-to-infrared, 129
Image device, prototype designs for a wide-field high-resolution low-scatter, 98
Image simulation, passive visible to infrared transducer for dynamic infrared, 140
Imager, design considerations for a reflective IR, 83
Imagers—pushbroom or whiskbroom scanners, wide-field, 38
Imaging in the location of point sources, comparison of coherent and incoherent, 115
Imaging Michelson interferometer for astronomical applications, near-infrared spectral, 61
Imaging with the Michelson interferometer, spectral, 2
Imaging system using a self-scanned HgCdTe/CCD detector array, thermal IR, 10
Imaging systems, dual active/passive infrared, 74
Imaging systems due to reflected ambient flux, errors in passive infrared, 110
Imaging systems, simulation model for infrared, 121
Imaging, the utility of available low quantum efficiency detector arrays for tactical, 136
Incoherent imaging in the location of point sources, comparison of coherent and, 115
Infrared image simulation, passive visible to infrared transducer for dynamic, 140
Infrared imaging systems, dual active/passive, 74
Infrared imaging systems due to reflected ambient flux, errors in passive, 110
Infrared imaging systems, simulation model for, 121
Infrared signatures from remote aerosols, simulation studies of, 149
Infrared spectral imaging Michelson interferometer for astronomical applications, near-, 61
Infrared target simulation applications, visible-to-infrared image converter for dynamic, 129
Infrared transducer for dynamic infrared image simulation, passive visible to, 140
Interferometer for astronomical applications, near-infrared spectral imaging Michelson, 61
Interferometer, spectral imaging with the Michelson, 2

Low quantum efficiency detector arrays for tactical imaging, the utility of available, 136
Low-scatter image device, prototype designs for a wide-field high-resolution, 98

Machined optics for reducing system complexity, precision-, 91
Measurement, effects of reflected background radiation on radiometric temperature, 133
Michelson interferometer for astronomical applications, near-infrared spectral imaging, 61
Michelson interferometer, spectral imaging with the, 2
Micrometer (Hg,Cd)Te array, development of an earth resource pushbroom scanner utilizing a 90-element 8–14, 18
Model for infrared imaging systems, simulation, 121
Mosaic sensor, system design for a staring, 53

Near-infrared spectral imaging Michelson interferometer for astronomical applications, 61
90-element 8–14 micrometer (Hg,Cd)Te array, development of an earth resource pushbroom scanner utilizing a, 18

Optics for reducing system complexity, precision-machined, 91
Optimum system performance, focal plane array design for, 66

Passive infrared imaging systems, dual active/, 74
Passive infrared imaging systems due to reflected ambient flux, errors in, 110
Passive visible to infrared transducer for dynamic infrared image simulation, 140
Performance focal plane array design for optimum system, 66
Plane array design for optimum system performance, focal, 66
Point sources, comparison of coherent and incoherent imaging in the location of, 115
Precision-machined optics for reducing system complexity, 91
Prototype designs for a wide-field high-resolution low-scatter image device, 98
Pushbroom scanner utilizing a 90-element 8–14 micrometer (Hg,Cd)Te array, development of an earth resource, 18
Pushbroom or whiskbroom scanners, wide-field imagers—, 38

Quantum efficiency detector arrays for tactical imaging, the utility of available low, 136

Radiation on radiometric temperature measurement, effects of reflected background, 133
Radiometric temperature measurement, effects of reflected background radiation on, 133
Reducing system complexity, precision-machine optics for, 91
Reflected ambient flux, errors in passive infrared imaging systems due to, 110
Reflected background radiation on radiometric temperature measurement, effects of, 133
Reflective IR imager, design considerations for a, 83
Remote aerosols, simulation studies of infrared signatures from, 149
Resolution low-scatter image device, prototype designs for a wide-field high-, 98

Scanned HgCdTe/CCD detector array, thermal IR imaging system using a self-, 10
Scanner utilizing a 90-element 8–14 micrometer (Hg,Cd)Te array, development of an earth resource pushbroom, 18
Scanners, wide-field imagers—pushbroom or whiskbroom, 38
Scatter image device, prototype designs for a wide-field high-resolution low-, 98
Self-scanned HgCdTe/CCD detector array, thermal IR imaging system using a, 10
Sensor, system design for a staring mosaic, 53
Signatures from remote aerosols, simulation studies of infrared, 149
Simulation applications, visible-to-infrared image converter for dynamic infrared target, 129
Simulation model for infrared imaging systems, 121
Simulation, passive visible to infrared transducer for dynamic infrared image, 140
Simulation studies of infrared signatures from remote aerosols, 149
Sources, comparison of coherent and incoherent imaging in the location of point, 115
Spectral imaging with the Michelson interferometer, 2
Spectral imaging Michelson interferometer for astronomical applications, near-infrared, 61
Staring mosaic sensor, system design for a, 53
System design for a staring mosaic sensor, 53

Tactical imaging, the utility of available low quantum efficiency detector arrays for, 136
Target simulation applications, visible-to-infrared image converter for dynamic infrared, 129
Temperature measurement, effects of reflected background radiation on radiometric, 133
Thermal IR imaging system using a self-scanned HgCdTe/CCD detector array, 10
Transducer for dynamic infrared image simulation, passive visible to infrared, 140
The utility of available low quantum efficiency detector arrays for tactical imaging, 136

Visible-to-infrared image converter for dynamic infrared target simulation applications, 129
Visible to infrared transducer for dynamic infrared image simulation, passive, 140

Whiskbroom scanners, wide-field imagers—pushbroom or, 38

Wide-field high-resolution low-scatter image device, prototype designs for a, 98
Wide field imagers—pushbroom or whiskbroom scanners, 38
